Presentation With The Go

Team Name: Xecuters

Have you ever faced this situation.. -> Not able to read what is on screen while attending any presentation?

Maybe I should ask you how many times….

Motivation

Main motivation behind developing this offline working application is to improve the presentation experience to the audience and taking those presentations closer to the audience without the hassle of external forces like internet or a projector

Workflow

Audience just have to open the app and connect to the main device which has the presentation.

Whenever the presenter changes the slide/page in his/her device, app automatically shows that slide/page in audience app.

Presenter can stop sharing the presentation whenever he/she wants.

Audience can also choose to exit the presentation.

Use cases

We can give presentations even in below scenarios:

1. If projector is not working
2. People not able to clearly see the screen
3. Power goes off and projector stops working
4. No internet connection

Advantage

1. Works Offline
2. Hassle Free

Future improvements

Can be extended from presentation sharing to video sharing.
